Which phrase marks the Northstar calibration in the Aurora observation guide? Include the source citation.

2 reasoning round(s) · 3 tool call(s) · 15s >

I have confirmed the answer from the source document.

The phrase that marks the Northstar calibration in the Aurora observation guide is **ORBITAL SAGE 4826**.

The guide's calibration record states: "The Northstar calibration phrase is **ORBITAL SAGE 4826**." It must be copied exactly into the observation record so a reviewer can distinguish evidence retrieved from this source from general model knowledge. [auror...de.md](#) The calibration is recorded after the second horizon scan and before the spectral review, once the reference line has been confirmed stable. [auror...de.md](#)
